ABOUT ME

Third Year Computer Science and Technology student with hands-on experience in Web Development, Data Analysis application. Delivered high-quality projects in my previous internship. Strong proficiency in Web Development, C, C++, Data analysis.I am enthusiastic about gaining practical experience and contributing to a dynamic work environment. Exited about the opportunity to embark on a fulfilling career journey and make meaningful contributions to a team.

EXPERIENCE

1. Data Science and Analysis Intern | Innovate Intern (Virtual) **1 Jun 2024 – 29 Jun 2024**

- ·Developed a fake news detection system using machine learning algorithms in Jupyter Notebook.
- ·Applied data cleaning, feature engineering, and supervised learning to improve model accuracy.

2.Web Development Intern | VaultofCodes (Virtual) **5 Feb 2024 – 5 March 2024**

- ·Gained hands-on experience in web development, focusing on modern technologies like HTML, CSS, JavaScript.
- ·Collaborated on real-world web development projects, including responsive design and user interface (UI) development.

PROJECTS

iTask Planner

Technologies: ReactJS, Tailwind CSS, Local Storage

- Created a productivity-focused to-do list application that helps users manage tasks efficiently.
- Utilized ReactJS for frontend development and Tailwind CSS for styling, ensuring a user-friendly interface.
- Integrated local storage for data persistence, allowing users to store tasks without needing external databases.
- Implemented features such as task creation, editing, deletion, and task completion tracking.

PassOP - Password Manager

Technologies: ReactJS, Tailwind CSS, Local Storage

- Built a secure password management tool where users can store and retrieve their passwords safely.
- Focused on UI/UX design using Tailwind CSS, ensuring a smooth and responsive interface for all users.
- Utilized local storage for encrypted password storage, providing an offline solution for users to securely store credentials.

E- commerce Data Analysis Project

Technologies: Power BI

- Cleaned and pre-processed large datasets using Python to ensure data quality and consistency.
- Analyzed customer purchasing patterns, identifying top-selling products, seasonal trends, and customer demographics.
- Visualized key metrics such as sales performance, revenue growth, and customer retention using Power BI, creating interactive dashboards for stakeholders.
- Provided actionable recommendations to improve sales strategies and inventory management based on the insights drawn from the analysis.

EDUCATION & CERTIFICATIONS

EDUCATION :

Pursuing B.tech in Computer Science and Technology (3rd Year) - **Shivaji University, Kolhapur**

CERTIFICATION :

1. Mastering Data Structures & Algorithms using C and C++
2. Spoken Tutorial - C and Cpp
3. Data Visualization Empowering Business with Effective Insights
4. Data Analysis and Visualization job simulation

SKILLS

- **Programming Languages**: C, C++, JavaScript, Java, Python, SQL, HTML, CSS
- **Web Development**: MERN Stack (MongoDB, Express, ReactJS, Node.js), Tailwind CSS
- **Data Analysis & Visualization**: Microsoft Power BI, Jupyter Notebook, Tableau
- **Databases**: MySQL, MongoDB
- **Tools & Platforms**: Git, GitHub, Power BI
- **Other**: Machine Learning, AI Tool Development, Responsive Web Design, Debugging & Testing
